DOOLLA HARI

Senior Frontend Developer | React.js | TypeScript | JavaScript | Redux

+91 8297782907 | haridoolla36@gmail.com | linkedin.com/in/hari-doolla | doolla-hari.vercel.app

PROFESSIONAL SUMMARY

Senior Frontend Developer with 8+ years of experience architecting and delivering scalable React applications across Healthcare, Telecommunications, Supply Chain, and Data Analytics. Strong expertise in React.js, TypeScript, JavaScript, Redux, and component-driven architecture, with experience building reusable, configurable, and high-performance enterprise UIs. Hands-on with REST APIs, Jest, Playwright, SonarQube, and modern frontend development practices, with experience mentoring developers and collaborating in Agile teams.

CORE TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks & Libraries: React.js, Redux, React Router, React Hooks, Material UI, Ant Design, Tailwind CSS, Bootstrap

API & Integration: REST APIs, Postman, Swagger/OpenAPI

Testing & Code Quality: Jest, Playwright, SonarQube, ESLint, Prettier

Backend: Node.js, Express.js

Version Control: Git, Bitbucket

Methodologies & Tools: Agile, Scrum, Kanban, Jira, Confluence, VS Code

AI-Assisted Development: Claude, Cursor, Lovable

PROFESSIONAL EXPERIENCE

Senior Software Developer | Gem Source IT Consulting Pvt Ltd, Hyderabad **Oct 2025 – Aug 2026**

- Architected core frontend modules for Aetna's ID Card Excellence platform using React.js, Redux, and React Hooks, directly supporting enterprise-scale insurance card issuance for a high-compliance healthcare client.
- Designed a configurable component library that absorbs evolving copay and business-rule changes without code rewrites, cutting delivery time on new requirements and reducing engineering rework.
- Established Playwright end-to-end coverage and SonarQube static analysis as mandatory release gates, sharply reducing production defects and raising overall code maintainability.

Senior Software Developer | iSpatial Techno Solutions, Hyderabad **Apr 2024 – Sep 2025**

- Directed client-side development and production deployments across several concurrent enterprise projects, standardizing shared UI libraries for reuse across teams.
- Translated cross-functional requirements into modular, responsive component architectures, shortening the feedback loop between design, engineering, and QA.
- Coached junior engineers through structured code reviews, raising team-wide proficiency in React patterns and modern JavaScript best practices.

Technology Analyst | Infosys Limited, Bengaluru **Jan 2024 – Mar 2024**

- Completed structured onboarding into enterprise-scale application architecture, engineering standards, and delivery frameworks ahead of live project deployment.

Systems Engineer | Tata Consultancy Services, Hyderabad **Nov 2021 – Jan 2024**

- Delivered production-grade React.js modules using Redux, Material UI, and React Router for telecom network-management platforms serving enterprise clients.
- Introduced standardized component and state-management patterns adopted across multiple product teams, improving consistency and reducing onboarding time.
- Held the line on code quality via SonarQube and aligned every release with corporate security-compliance requirements.

Software Developer | Innova Solutions Pvt Ltd, Hyderabad **Jan 2021 – Nov 2021**

- Delivered client-facing product features end-to-end using React.js and Redux, from requirement breakdown through production release.
- Worked directly with QA and backend teams to triage defects quickly and keep releases on schedule under compressed timelines.

Software Development Engineer | Transin Logistics Pvt Ltd, Hyderabad **Sep 2018 – Dec 2020**

- Built the transporter-facing web platform for trip execution and load-receipt processing, wired end-to-end into ERP and finance systems.
- Optimized component rendering and data flow across core logistics modules, measurably improving page load performance.
- Delivered compliant, real-time integrations with government logistics APIs for accurate regulatory data handling.

PROJECTS

ID Card Excellence | Healthcare | Aetna **Oct 2025 – Aug 2026**
Technologies: React.js, Redux, TypeScript, Jest, Playwright, SonarQube

- Built the core UI layer of a production platform issuing insurance ID cards at enterprise scale.
- Designed an override-capable configuration system letting business teams adjust copay rules without new deployments.
- Backed every feature with Playwright regression suites, catching UI regressions before they reached production.
- Enforced SonarQube quality gates across the codebase, keeping defect leakage low through frequent release cycles.
- Persisted card and copay data through a backend API layer for reliable downstream processing.

Open Data Platform | Data Management & Analytics | iSpatial Techno Solutions **Apr 2024 – Sep 2025**
Technologies: React.js, Redux, TypeScript, Jest, SonarQube, FileZilla, Bitbucket

- Built interactive dashboards and dynamic filtering for a real-time, high-volume data analytics platform.
- Integrated a conversational AI chatbot that let users query datasets in plain language instead of configuring manual filters.
- Profiled and trimmed frontend bundle size to keep dashboards responsive as dataset volume scaled.
- Managed asset delivery and content workflows through FileZilla, with version control via Bitbucket.

ACSS User | Telecommunications | Tata Consultancy Services **May 2023 – Jan 2024**
Technologies: React.js, Redux, Material UI, Node.js, Jest, SonarQube, BlackDuck, Sysdig

- Built automated query-submission and credit-approval workflow tooling for regional telecom operators.
- Designed a region-aware state layer that branched business logic correctly without duplicating code across markets.
- Wrote Jest unit tests and enforced SonarQube coverage thresholds across every release.
- Ran BlackDuck and Sysdig scans in the release pipeline to catch security and licensing risks early.

Network Circuit Order | Telecom & Infrastructure | Tata Consultancy Services **Aug 2022 – Apr 2023**
Technologies: React.js, Redux, Material UI, Node.js, Jest, SonarQube, BlackDuck, Sysdig

- Built a circuit-provisioning and infrastructure-tracking tool covering global network locations.
- Designed modular components for reuse across the broader telecom product suite, cutting duplicate build effort.
- Aligned frontend data contracts with backend provisioning APIs through close cross-team collaboration.
- Ran the release through a CI pipeline alongside BlackDuck and Sysdig scans to keep deployments secure and consistent.

Truce Platform | Freight & Supply Chain Logistics | Transin Logistics **Sep 2018 – Dec 2020**
Technologies: React.js, Redux, Node.js, Express.js, Material UI, Ant Design, MongoDB, Jest

- Built a freight-operations dashboard for booking, real-time load tracking, and carrier status updates.
- Integrated government E-way Bill APIs directly into the booking flow for regulatory compliance.
- Designed custom Material UI modules tailored to freight and logistics workflows.
- Worked with operations teams to refine real-time load-tracking accuracy.

EDUCATION

Master of Computer Applications (MCA) **2015 – 2018**
P.B. Siddhartha College of Arts & Science, Vijayawada, Andhra Pradesh | Score: 77%

Bachelor of Science (B.Sc.) **2012 – 2015**
Sri Harshini Degree College, Ongole, Andhra Pradesh | Score: 66%
